

Baiyang Yao (Sam)

Senior Full-Stack Software Engineer

Auckland, New Zealand | +64 27 450 0897 | moviegoer24@gmail.com | samyao.me | linkedin.com/in/samyao24

PROFILE

Full-stack software engineer with over five years of experience building customer-facing products and developer platforms at Lalamove, Tencent Cloud, and a US technology startup. Strong in React, TypeScript, Node.js, and microservice-based systems, with experience owning technical delivery from product requirements and architecture through production support. Currently completing a Master of Information Technology at the University of Auckland and looking to contribute this experience to a New Zealand software engineering team.

PRODUCT & TECHNICAL CAPABILITIES

Product & Delivery: Technical ownership, feature refinement, requirement clarification, task decomposition, sprint coordination, cross-functional delivery

Engineering Judgement: Technical feasibility and trade-offs, conversion and performance metrics, UX consistency, internationalisation, incident response, 0-to-1 delivery

Technical Foundation: React, TypeScript, Next.js, Node.js, Python, REST APIs, microservices, SQL, MongoDB, AWS, GCP, Docker, CI/CD, AI agents and LLM-assisted development

EXPERIENCE

Senior Full-Stack Engineer

Jun 2021 - Apr 2025

Lalamove Delivery

Shenzhen / Hong Kong

- Acted as technical owner for several Driver products, translating product requirements into technical plans, breaking work into implementation tasks, and coordinating delivery across sprint cycles.
- Led frontend architecture for Driver CRM and Growth systems using React, Next.js, and Vite, contributing to an 18% increase in conversion rates. Led i18n readiness for overseas expansion, including a reusable Right-to-Left (RTL) component framework for Middle Eastern markets.
- Drove the migration of selected legacy PHP/Laravel backend services to Node.js to better align the backend stack with the team's JavaScript expertise. Built the shared Node.js SOA SDK integrating Apollo Config, SkyWalking tracing, and Consul service discovery, standardising service development and enabling the team to own backend services more effectively.
- Led incident response to active SMS toll fraud targeting legacy driver registration, containing losses through traffic analysis, IP blocking, and hCaptcha tuning. For the long-term fix, took ownership of Odoko, a unified OTP/SMS platform, and drove its rollout from a localised solution to the company-wide standard, avoiding an estimated \$10,000+ in telecom abuse costs.

Software Engineer

Apr 2020 - Jun 2021

Tencent Cloud

Shenzhen, China

- Developed core React modules for the CODING DevOps platform, including CI/CD, Code Analysis, and Automation Testing workflows, helping reduce average build times by 40% for enterprise users.
- Maintained and optimised a proprietary micro-frontend architecture, improving child-system loading speed by about 50% and enabling independent deployments that increased release frequency by 300%.
- Built and maintained an internal React component library based on Ant Design, standardising UX/UI across the CI/CD product line and improving frontend delivery efficiency by 30%.

Software Engineer Intern

May 2019 - Sep 2019

BeeHex 3D Print

Columbus, Ohio, USA

- Built the company's 3D food-printing e-commerce platform using React, Redux, and TypeScript, enabling its first direct-to-consumer digital ordering channel.
- Collaborated on UI/UX implementation for the 3D Cake Printer touchscreen and developed a Next.js community portal using server-side rendering to improve organic search visibility.

EDUCATION

Master of Information Technology

Jul 2026 - Nov 2027

University of Auckland

Auckland, New Zealand

Current postgraduate study focused on software, cloud, networking, and digital systems.

Bachelor of Arts in Interactive Media

Aug 2015 - May 2019

Miami University

Ohio, USA

Dean's List Honor

SELECTED ENGINEERING PROJECT

The Orion - 0-to-1 Personal Platform

Apr 2025 - Present

React / TypeScript / Node.js / MongoDB / Firebase / Cloudflare / GCP

samyao.me

- Scoped, built, and launched a live platform from 0 to 1, using AI agents to accelerate planning, implementation, refactoring, and debugging while retaining ownership of architecture, code review, integrations, and production validation.
- Combined authentication, RBAC, media storage, transactional email, audit logging, and SEO pre-rendering into a coherent end-to-end product using managed cloud services and custom application logic.

LEADERSHIP & ACTIVITIES

Class Representative - COMPSCI 734, University of Auckland

Jul 2026 - Nov 2026

- Represent student concerns and communicate issues, feedback, and resolutions between students and the teaching team.

APRU Global Sustainability: Waste & The City 2026 - UoA Representative

Sep 2026 - Nov 2026

- Participate as a University of Auckland representative in the virtual programme exploring urban waste and sustainability challenges.

AWS Agentic Football - 1st Place, Auckland Workshop

Aug 2026

- Built and deployed an AI-agent football team, finishing first in the Auckland workshop competition.
