

Baiyang Yao (Sam)

Senior Full-Stack Software Engineer

Auckland, New Zealand | +64 27 450 0897 | moviegoer24@gmail.com | samyao.me | linkedin.com/in/sam-y-54828a140

PROFILE

Full-stack software engineer with over five years of experience building web products and developer platforms at Lalamove, Tencent Cloud, and a US technology startup. Strong in React, TypeScript, Node.js, and microservice-based systems, with experience owning features from architecture through delivery and production support. Currently completing a Master of Information Technology at the University of Auckland and looking to contribute this experience to a New Zealand software engineering team.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Vite, Redux, Tailwind CSS, Ant Design

Backend & Data: Node.js, Koa.js, Express, REST APIs, Microservices, SQL/MySQL, MongoDB, Redis

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Kafka, Nginx, Vercel, Cloudflare, CI/CD

Mobile & Architecture: Flutter, Micro-frontends, SSR, i18n/RTL, RBAC, OAuth/JWK

EXPERIENCE

Senior Full-Stack Engineer II

Lalamove Delivery

Jun 2021 - Apr 2025

Shenzhen / Hong Kong

- Served as Product Tech Owner (PIC) for the Hong Kong Driver Full-Stack Team, leading feature refinement, task decomposition, technical coordination, and delivery in a fully English-speaking environment.
- Led frontend architecture for Driver CRM and Growth systems using React, Next.js, and Vite, contributing to an 18% increase in conversion rates. Led i18n readiness for overseas expansion, including a reusable Right-to-Left (RTL) component framework for Middle Eastern markets.
- Helped pioneer the adoption of Node.js for backend services and built the core Node.js SOA SDK, integrating Apollo Config, SkyWalking tracing, and Consul service discovery to standardise microservice development.
- Led incident response to active SMS toll fraud on legacy driver registration. Contained losses through traffic analysis, IP blocking, and hCaptcha tuning, then took overall ownership of Odoko - a unified OTP/SMS platform I had helped develop - and scaled it into a company-wide solution, preventing more than \$10,000 in potential telecom abuse costs.

Software Engineer

Tencent Cloud

Apr 2020 - Jun 2021

Shenzhen, China

- Developed core React modules for the CODING DevOps platform, including CI/CD, Code Analysis, and Automation Testing workflows, helping reduce average build times by 40% for enterprise users.
- Maintained and optimised a proprietary micro-frontend architecture, improving child-system loading speed by about 50% and enabling independent deployments that increased release frequency by 300%.
- Built and maintained an internal React component library based on Ant Design, standardising UX/UI across the CI/CD product line and improving frontend delivery efficiency by 30%.

Software Engineer Intern

BeeHex 3D Print

May 2019 - Sep 2019

Columbus, Ohio, USA

- Built the company's 3D food-printing e-commerce platform using React, Redux, and TypeScript, enabling its first direct-to-consumer digital ordering channel.
- Collaborated on UI/UX implementation for the 3D Cake Printer touchscreen and developed a Next.js community portal using server-side rendering to improve organic search visibility.

EDUCATION

Master of Information Technology

University of Auckland

Jul 2026 - Nov 2027

Auckland, New Zealand

Current postgraduate study focused on software, cloud, networking, and digital systems.

Bachelor of Arts in Interactive Media

Miami University

Aug 2015 - May 2019

Ohio, USA

Dean's List Honor

SELECTED ENGINEERING PROJECT

The Orion - Personal Website & Portfolio

React / TypeScript / Node.js / MongoDB / GCP / Cloudflare / Vercel

Apr 2025 - Present

samyao.me

- Built and deployed a responsive full-stack web application using React, TypeScript, Tailwind CSS, Node.js/Express, and MongoDB, with Cloudflare R2 for media management and Vercel/GCP for deployment.
- Implemented role-based access control, request logging and audit trails, plus a concurrent Node.js/Puppeteer pre-rendering workflow to make Vite SPA content SEO-friendly.

LEADERSHIP & ACTIVITIES

Class Representative - COMPSCI 734, University of Auckland

Jul 2026 - Nov 2026

- Represent student concerns and help communicate issues, feedback, and resolutions between students and the teaching team.

AWS Agentic Football Cup - Winning Team

2026

- Built and deployed an AI-agent football team during an AWS technical workshop and finished first in the live competition.
